Thrombosis or embolism originating from large artery atherosclerosis causes 15% of the ischaemic strokes with transient or permanent functional deficit. In 2016, there were globally 9.6 million cases of ischaemic stroke, leading to 2.7 million deaths. The primary prevention of stroke is based on the control of lifestyle-related risk factors and the best medical therapy including optimal management of hypertension and diabetes, antithrombotic and lipid-lowering therapy, and smoking cessation. 3 Meschia JF Bushnell C Boden-Albala B et al.
